MANHATTAN, Kan. (WIBW) - Boehringer Ingelheim and Kansas State University are joining forces to invest in the future of veterinary medicine.

Kansas State University says Boehringer Ingelheim, a leading provider of animal health products, and its College of Veterinary Medicine have announced a collaboration that will support the pipeline of highly skilled veterinarians and continued innovation in the heart of the Kansas City Animal Health Corridor.

According to K-State, Boehringer Ingelheim's U.S. Animal Health business will contribute \$800,000 over the next five years to the KSU Foundation. It said the funds will support interaction and collaboration between the company and veterinary students at one of the leading animal health schools in the nation.

K-State said the collaboration will create opportunities for the company's employees to train and present to students and allow for additional professional development and learning initiatives between Boehringer Ingelheim and the university. It said as part of the collaboration the college built a new auditorium named the Boehringer Ingelheim Animal Health Auditorium that was completed in August of 2020. It said the building is now open to students for fall 2020 classes.
